

Colonel Wilkinson is a 57-year-old Caucasian female, well-known to me, who presents for a followup visit for high blood pressure. Patient denies any complaints or problems. She denies any chest pain, shortness of breath, diarrhea, constipation, vomiting, nausea, and dysuria.

Last mammogram June 6, 2007, which showed no evidence of malignancy. Last sigmoidoscopy was done one year ago. Patient also with hysterectomy, currently on Premarin, doing well. Has a history of glaucoma for which she is followed by ophthalmology.

Patient is known to be hypertensive, for which she is prescribed the Vasodilator medication Catapres. She has had elevated LDLs and triglycerides in company with reduced HDL levels.
